In my car the orange line for button lights is day light time controlled, ie it only worked in the evening. Hello , i'm searching an update file , i have the same unit and i have Android 7.0 Kernel3.10 , and i want Android 8 or 9 , anything ... The load lasts 30min. but it gave error in USB1. If so, in what way? I was told the max size is 32GB so wondering if anyone has gone above that without issues: press Ctrl+Alt+V, then go to Window and select "write memory". Thanks, i was able to flash (using flash tool) a factory firmware from 4pda.ru, then i flashed the 05052019 firmware using flash drive. And that is simply putting the zip file on a USB drive. I'm trying to install YT9218C_00005_V004_20190522_HIFI_U12_FLASH (Root, TWRP) (the one with XYAUTOUFG folder in it), but the upgrading doesn't start. Received firmware files from seller, but its probably the update files, not the complete firmware. I will try turning off bluetooth first. Can i connect them and get canbus data on my HU? and then its like finding needle in a haystack. Hi, Me and @viktorsaari have the same problem, we are looking for better radio app, trying them from other HU similar to ours. Thanks Viktorsaari. In a personal message, on the site 4PDA will give you a link. What is the next step to get the unit to bootup and return access to the USB port? Open in text editor. Connect to usb1 port. Well it's just because I can't install the 05 version right away (keep saying that there is an incorrect firmware). Should be able to find it if you search Sent from my iPhone using Tapatalk I managed to install play store and map but could not sign in to my Google account. Page 5 Hi there I have noticed today that my unit is extremely hot in the back, close to the connector with the power wires I am not sure at all if this just happens with the new MCU or if it also happened with the previous one... Thanks again Thanks Maxkir & Viktorsaari for your explanations... In the message link to the firmware dump YT9218_00002_V004_20190624. It takes 1.5-3 minutes. Only thing I want to do with my HU is install firmware with root (+ eventually TWRP). It has been the fastest and most stable for me so far Do you know the differences between the fakes firmware vs the other ones? I think that's normal behavior, right? Are you saying that after bridging the contacts you gave him power and entered recovery mode like cell phones? and Black should always be ground. Doesn't work at all, a mi me pasó igual que a vos, con el destornillador no tuve éxito al puentear los pines de prueba. I have shared what worked on mine, and also my unit's specs are in the 1st post. So in theory, it should work on all similar units. & Offline maps and igo nexgen as backup, because sometimes Sygic asks me connect to internet and not work without. Seller says "Sorry this unit doesn't support RDS". Luego hice lo mismo con una memoria micro sd y funcionó. sorry to bother you 1. Try formatting the usb drive with sdcard formater, try a different usb disk, or a card reader, format fat32, try both usb ports. The update sometimes give same error on my unit too, but eventually works when trying different things. just shade the two points together. On the site 4PDA more praise the November. The Russian site says use only key1 but where do we connect it to? Thanks Last edited: Aug 8, 2019 In my opinion it is obviously 1 GB DDR. Btw i dont want to change boot animation, it is just boot logo. What release do you have? You'll also get a picture of what potential problems may arise when you're driving the vehicle in the future.CC0/StockSnap/Pixabay What Is the Vehicle's History?Avoid buying a used vehicle that's been in an accident that totaled it, or that's been flood damaged. Thank you After installing the ROM from PDA4.ru: YT9218C_00005_V004_20190522_HIFI_U12_FLASH I have issues when using power of the headunit. When i try to select it, its just close the car setting and nothing change. its called GalaMusic. Hey guys, am I in the right topic for my HU? Nothing happened. Thanks for that..... I honestly have no idea how to do that. CC0/ArtisticOperations/Pixabay If you're purchasing your first car, buying used is an excellent option. Click start- the name of the button> the button itself and so on all the buttons, then close and ok Sorry, its ROM 1 BOOT1 4mb, its the first partition, which holds the preloader. I did not check the reloader. Okay, thanks. Maybe i can try changing to a previous version. After recovering boot, try flashing the fastboot firmware by first unchecking the preloader file. In the first post there is an instruction how to dump preloader but it is better to hold whole dump just in case... I wired it directly to red line, so it stays on when the unit is on, and goes off with the unit. 2- Device put in "USB debug mode : ON". Hi there I have noticed today that my unit is extremely hot in the back, close to the connector with the power wires I am not sure at all if this just happens with the new MCU or if it also happened with the previous one... or may be contact the op there, if you have 22.05 version, you are not missing anything by not updating to 24.06. THANK YOU Reactions: coffey Sleep mode not working on my HU Could you show me the picture of wires to invert Sleep mode not working on my HU. I'm still using the original firm soft on it. If you're looking at a used car with low mileage, be sure the shape of the body is good. Thanks I would flash firmware as you instructed. In terms of rooting my device, once I get the file is it usually as simple as putting the file on a USB drive and reboot the head unit? What is the difference? First of all thanks to Viktorsaari for his patience with us and epile10 for the GND tip. If the device is not detected, you need to power it on. ----- Post added at 10:30 AM ----- Previous post was at 10:12 AM ----- Try: 26959910 No, you need a canbus adapter (canbox), it converts canbus levels/signals to serial 3'v. anyone else trying to use the swim port on the board? I wanted something with that old school carousel horizontal scroll, so n7player Music Player fits the bill until something else appears. And the problem is solved! You should give a try... Tambien logré actualizar a mcu 3.1 pero no logre actualizar el firmware, el que esta en el enlace de la primer pagina no funcionó, tiro error, despues bajé el que está en una de las paginas que es la version 9217B que es justo el que yo tengo, inició la actualización, al reiniciar cargó uno poco la barra de estado y luego tiro error. Sygic works well with agama's central widget. Viktorsaari, I am looking in that folder and do not see a Boot_1. Thank you Hello again All, I dont meant to hijack this thread as my own personal project, I hope to learn and grow from this experience and if my additional post can help someone in the future that would be a good thing. Tricky Tricky! Looks like I have 1GB DDR and not 2GB. Do you notice anything odd about the sound from each speaker? Also the doubts I have at the moment is if I need to install a driver for the flash tool to detect the equipment. For now I still use agama. You have to unmount usb again to go back. Anyone know a better radio app which would show station names at least? It will be so displayed on any firmware. What helps for me is to install VNC Server app onto the head unit. A card reader with a 6GB MicroSD Card works for me and only at specific USB ports. Upgrade: (MCU 2.8) (Thanks lemmon and sandr2010) extract the mcu file into flash drive. (my car, VW golf plus 2013, is now shown in Homescreen...) Reactions: karadas87 and raphael.atenza Sorry a bit lost here..... Radio sound appear loud Evertime it launch... OK, the long press doesn't turn off the unit, the date screen is the normal behaviour for long press. Thank you A mi me funciona bajar "Firmware via flash tool: Rooted TWRP 20190523 (Link) Thanks Maxkir" luego descomprimir y dentro de esa carpeta cargar MT3367 Android_scatter.txt on flash tool, despues alt + ctrl+v, despues ir a ventana, elegir write memory, luego cargar desde write memory el archivo user, on begin adrees poner 0x0, on region poner emmc_user. In non hifi, 180 switch doesn't make any difference in sound. I believe there are some patches available at 4pda forum (in 1st post) but you have to find yourself. There are 3 ROM versions for the 8227L based head units. Now I have root! Ty @viktorsaari Last edited: Jul 31, 2019 I believe this is usb version. Make a Full Backup/Memory Dump: Open SPflashtool, Select Memory Test Tab, Select only RAM Test (uncheck the rest), push start, and connect the unit. The amplifier constantly on when vehicle is off will definitely affect the vehicles battery. I recommend USB but Wifi does work a bit slower though. I'm still a noob with these Android head units. Can you advise which rom to download and do I need to update mcu? In the original apk there are some hidden widgets and the hidden feature for using 3 Homescreen pages with scrolling between those and hidden feature for adding custom app icons and/or 3rd party widgets. (my car, VW golf plus 2013, is now shown in Homescreen...) How did you do this? As for the other file I also be including the preloader_8227l_demo.bin on the USB drive? Reactions: PamelaGirl Okay thanks. With Bluetooth connected or not also same issues... Here is the check list: Firmware May 2019 or higher. I did nothing of that sort. Reactions: ayeef106 No luck with adb either. I can't install the firmware you posted, the link is not dead, copy and paste complete until the firmware update link. What can I do? Last edited: Jul 15, 2019 Reactions: saxophone101 and raphael.atenza Page 8 Hi there, why the device wont be updated? I can see the upgrade but after a few seconds the unit is restarted..... My MCU is 3.1 now. Thanks for the link, much appreciated! When the download was complete I put all the files on my USB and had the unit reboot. I am also looking into updating to 20190522. Deje un cable preparado en (-) Entonces lo que hay que hacer es puentear el punto de prueba con el cable gnd, enchufar el cable usb, luego de escuchar el sonido cuando se ve actividad en la barra de progreso desconectar el cable del punto de prueba y conectar gnd (-), luego tendria que seguir la carga de datos sin problema. Hi Viktorsaari First of all thanks ... RESET BUTTON FOR FLASHING -Also, not sure if this is valid but I have flashed a boot partition by holding down the reset button after disconnecting usb to pc then plugging in the usb starting the download or memory write, then releasing the reset button. Firmware for YT9213 Device: (Link) (Thanks pajurp) Update / Upgrade Files USB flash drive: Firmware 20190522 Hifi: (Link) (Thanks foxjiggle , iSevenAuto) Firmware 20190906: (Link) MCU 3.1 (Link)(Thanks foxjiggle) MCU 2.8 (Link) (Thanks lemmon and foxjiggle) Memory Dump Procedure via flashtool: (Memory dump is only needed if you need full recovery from a backup. You modify your Wifi to have a static IP address, and have your VNC Server app to boot at startup. luego puentear puntos de prueba, hacer clic en write memory, enchufar el cable

radio 1. I need some help Received firmware files from seller, but its probably the update files, not the complete firmware. Could I install the latest rom or mcu to get Google to work? I accidentally flash preloader and end up bricking the device undetected to the pc. I will send you a private message. As for audio while reversing, there is an option in "car settings" called "reverse mute off" you have to tick it, to keep audio playing while reversing (which is dangerous by the way). Pencil lead works too. I had similar problem. tried both ways powered and un-powered tried with splash and other software. 1.Open unit and connect a short out the two test points with a single wire? If there are a lot of stains in the upholstery or if something smells off, then consider looking at other cheap used cars on sale.CC0/Iquuz/Pixabay Shop Around for LoansEven if you're looking at a used car sale site, it's critical that you shop around for the best loans. This is a really annoying bug... Page 19 I would double check the wiring, Yellow = continuous 12v. Thanks The headunit Reloaded app is so that you can use Android Auto from a phone via USB or Wifi. Here is all that I have found useful in successfully reviving my device. T.I.A A mi me pasó lo mismo, a mi usb le di formato con el formateador de memoria sd y no paso nada. Mine provides HVAC controls for my Honda. 2. Iguualmente las dudas que tengo al momento es si necesito instalar algun driver para que el flash tool detecte el equipo. Maybe i have different chip? Sorry a bit lost with all different procedures So I suggest you make a backup first, you can find it in google I have tried everything, but I cannot make the unit go in META mode, the test points thing did not work, and the computer does not detect the device when plugged. Sorry I can't upload an image for the moment. My YT9T218C doesn't show that in the notifications Sent from my iPhone using Tapataalk For the Android Upgrade Procedure.....can you please confirm if with the update the apps/ configurations already in the unit are lost?Thanks Rooted TWRP version? I need to reinstall it each time, bug on the no sleep mode Reactions: raphael.atienza Have you tried other navigation apps? What I did was use the MT8127 Android_scatter that is on the first page, in the Rooted_TWRP folder YT_9218C_00005_V004_20190523 (UI2) I selected boot.img and Android only. the June update is for a slightly different firmware, containing letter B instead of C. The subwoofer output is on another pin (See Picture). I think I may have a different Radio chip then. I assume all can be done by just plugging in USB drive. a bit off topic... You'll see the new multi window option there. Thanks again for the response and all the help and support once again. Last edited: Aug 9, 2019 It depends on what file you are using to upgrade. This was before I connected the amplifier. The stock launcher is not customizable at all and i'm using Web guru now but volume control is not working. Did you know where to locate all the internal logo folder in the head unit system? Also the process of installing firmware via XYAUTOUPC folder has not worked for my device, but I have heard it works on other's. Thanks Okay I see, I think I have MCU 2.8 and rooted May FW. Can you explain what you soldered please? Someone solve this issues with flashing diff rom which make for 2/16G or 32G. The truth that I was afraid of this procedure with the test point. Thank you for all the information you provide in this forum, if it were not for these now I would have a brick thrown on a shelf. Setting touch buttons. mi microsd estaba defectuosa. and your system memory? My Male to Male USB cable is ready to go. Ok, I think i've fixed it. They seem to be very similar but have a different user interface, wondering if then chinese units can be flashed with that firmware. Remove the short when write process starts. Black = continuous Ground, Red= 12 only when key turned ACC or car ON. Last edited: Jul 31, 2019 bootloop after installing new launcher Hi, i have the following: Android: YT9217C_00005_V003_20190425_HIFI kernel: 3.18.22 DDR: 2G Flash: 32G cpu: A7 1.3GHz x 4 Amplifier: AC7315 MOS bile duct 45W X 4 Dispaly: 1024*500 MCU1: HW8227L-3.3-SW0-1.9 i have installed a new launcher from play store, and my device is now on bootloop i'll have to reset it via flash drive, but what is the latest firmware that i can install on it, since i'll be resetting it, and might be a good time to flash a new firmware Agama launcher to change sound level?
